## Katamars IIS Setup Help

1 Create an Empty Web Site for example Katamars

2- Make the app pool user as non managed

a) To see the apppool user click on Basic settings

Edit Site	?	×
Site name:     Application pool:       Katamars     Katamars	S <u>e</u> lect	
Physical path:         C:\Temp\Katamars         Pass-through authentication         Connect as         Test Settings		
ОК	Cancel	

In my case the apppool account is called katamars, make sure the settings look like

Edit Application Pool ?	×
Name:	
Katamars	
.NET CLR version:	
No Managed Code	$\sim$
Managed pipeline mode:	
Integrated $\checkmark$	
Start application pool immediately	
OK Cancel	

3- Import the Zip File

Connections		Application Pools This page lets you view and manage the list of application pools on the server.						
<ul> <li>✓ I Application</li> <li>✓ I Sites</li> </ul>	on Poo	ols	applications. Filter:		- 7	🖉 <u>G</u> o 🕞 🥁 Show	w <u>A</u> ll Group by:	No Groupi

		Deploy Rename Switch to 0	Content View	•	2 2 2 2	Install Applicatio Export Applicatio Import Applicatio Delete Web Site a Recycle	n From Gallery on on and Content	

Select Package and click next

Click next

Leave application path empty

Import Application Package

j Ente	r Application	Package In	formation			
Enter information	n that is required	to install this	package:			
Full site path v Katamars/	vhere you want to	o install your a	pplication (for ex	ample, Default We	b Site/Application).	
		[	<u>P</u> revious	<u>N</u> ext	<u>F</u> inish	Cancel

Click next

Make sure the physical path has enough permission to be accessed by apppool,

You can go to security and add it as IIS AppPool\Katamars while katamars is the apppool name

Folder Security where you put the physical folder for katamars for example C:\Temp\Katamaras

You need to add the app pool and give it read + write

After everything , run cmd as administrator

And type iisreset
